

Smile Clean CRM — Team Guidebook

For every staff member: what your role can do, and how one order flows from first contact to paid invoice. Keep this open during your first week.

- Web app: ask your admin for the URL (local dev:)http://localhost:4321
 - Sign in at . There is — accounts are created by an admin under ./loginno self-registrationSettings → Team
-

1. Roles at a glance

If a button you expect is missing, you almost certainly lack the permission — ask your ADMIN, don't share logins.

2. First day (SUPER_ADMIN / ADMIN)

- 1 Sign in with the seeded admin account from (/)..envSEED_ADMIN_EMAILSEED_ADMIN_PASSWORD
 - 2 : create one account per staff member with the correct role from the table above.Settings → Team
 - 3 : check service catalog, tax rate, and company details (these print on invoices).Settings → Workspace
 - 4 : each cleaner needs a cleaner profile linked to their login so dispatch can assign them.Settings → Team
-

3. One order, start to finish (simple cleaning job)

Step 1 — Lead (sales / manager / admin)

Name + phone are required; pick the true source (LINE, Facebook, walk-in...). Status flow: .Leads → New Lead.new → contacted → quote_sent / booked → won / lost

If saving fails, read the error message — it tells you exactly what's wrong (usually the phone number format).

Step 2 — Convert to customer (manager / admin)

Open the lead → . Address and area are required. A is created automatically — you don't need to touch Sites for simple jobs.ConvertDefault Site

Step 3 — Booking (manager / dispatch)

Pick the customer (name, email and address pre-fill), choose service, date/time and the primary cleaner. Leave on "One-time" unless the customer asked for a schedule.Bookings → New Booking.Repeat

Step 4 — Dispatch (dispatch)

board → assign crew. A cleaner taps on the booking — first tap wins, double-booking the same cleaner at the same time is blocked.DispatchAccept

Step 5 — The job (cleaner)

Optionally attach a checklist (see §5).My bookings → Accept → check in (Attendance) → do the work → set .

Step 6 — Invoice & payment (accountant)

Booking row → (only bookings can be billed; one active invoice per booking — retries never duplicate). Mark when money arrives. Follow up open invoices in .InvoicecompletedpaidReports → Financial (AR aging)

4. Commercial customers (restaurants, condos, malls, offices)

Everything in §3, plus only what you need:

- — one customer, many branches. Add them under , then pick the site on each booking. The booking form auto-selects the default site.SitesSites
- — (customer + service lines; totals and tax compute automatically) → → when the customer accepts. An accepted quote is terminal and ready to become a booking/contract.QuotesQuotes → AddSendApprove
- — ONLY for formal agreements. Most recurring customers never need one. Lifecycle: next period (the old row stays as history, a successor draft opens). Illegal jumps (e.g. draft → expired) are rejected.Contractsdraft → Activate → active → Renew
- — set to weekly / biweekly / monthly on the booking. The scheduler rolls the series forward automatically and can never create the same occurrence twice.RecurringRepeat

Rule of thumb: One-time, recurring without contract, and contract-based billing all coexist.no contract, no problem.

5. Checklists & proof of work (optional)

Nobody is forced to use checklists. When a commercial client wants proof:

- 1 Booking row → (or open and pick the booking).ChecklistChecklists
 - 2 (e.g.).New from templateFactory Deep Cleaning
 - 3 Cleaner ticks items, attaches photos (jpg/png/webp, max 8 MB — stored privately, staff-only download).Before/After
 - 4 Client confirms with signature.
-

6. Daily rhythm per role

- — Dashboard: new leads, today's bookings, expiring contracts, quote win rate ().MANAGERReports → Commercial
 - — Dispatch board assignments; check-ins.DISPATCHAttendance
 - — Accept jobs, check in/out, complete + checklist + photos.CLEANER
 - — Completed bookings → invoice → paid; revenue by site/contract in .ACCOUNTANTReports → Commercial
 - — Team accounts, settings, audit log (SUPER_ADMIN only), contract approvals and renewals.ADMIN / SUPER_ADMIN
-

7. Troubleshooting

8. Golden rules

- 1 Never share logins — permissions keep money and customer data safe.
- 2 Phone numbers: always with country code ().+66 ...
- 3 One-time jobs need only Lead → Customer → Booking → Invoice.
- 4 Add Sites/Quotes/Contracts/Checklists only when the customer needs them.

5 When in doubt, ask your ADMIN — don't work around permissions.
